The following suggestions are presented in order to minimize revisions and editorial corrections. Uniformity of style and format necessitates attention to detail by authors.

**STYLE.** Recent issues of the Journal should be examined so that authors become familiar with its general style. Manuscripts should be neatly typewritten on 12-point, 10-line, letter-size paper with wide margins and double spacing throughout. Pages should be numbered consecutively, and placed in a group at the end of the manuscript. Keep the number of tables at a minimum; numerous small tables, especially, should be avoided. When the headings for a number of tables are similar, an attempt should be made to combine the tabular data thereby avoiding numerous repetition of the same headings. Use a double horizontal line immediately below the title of the table and a single horizontal line below the column headings and at the bottom of the table. Do not use horizontal lines in the interior of the table and use no vertical lines. Tables should be planned and prepared with proper spacing so that such lines are not necessary.

Footnotes to tabular data should be noted by asterisks, daggers, or other signs to avoid confusion with numerals in the table or elsewhere. The general style desired in tables can be seen by examining recent issues of the Journal.

The abstract should be a concise summary of the significant facts contained in the paper. It should be brief and concise, not over 250 words and preferably shorter, but complete sentences should be used to promote comprehension and clarity and to avoid ambiguity. Words such as "are presented" or "is explained" should be avoided. Abstracts are not to contain illustrations, tables, references, or footnotes.

**REFERENCES or LITERATURE CITED.** Books and journals must be cited as follows: "Patterson (1940)" or "(Patterson, 1940)." In case of more than two authors, "et al." may be used. Acknowledgments are incorporated in the regular text at the end of the manuscript, just before Literature Cited. The following suggestions are presented in order to minimize revisions and editorial corrections. Uniformity of style and format necessitates attention to detail by authors.

**FOOTNOTES.** Footnotes to tables are permissible as described above. Reference to the literature is not permitted as footnotes but must be handled as described below. Acknowledgments are incorporated in the regular text at the end of the manuscript. References to literature should be incorporated in the list of references in the order corresponding with the authors' names.

**TITLES.** Title is to be typed in capital letters. Scientific names of organisms in the title should be underlined. The author's name should be typed in capital letters below the title. The address of the department, institution, city and state which are to be credited with supporting the author and his work should be typed (caps and lower case) below the author's name and underlined. If more than one institution is to be credited, their names should appear in the order corresponding with the names of authors.

Main headings are to be typed in capital letters, centered and not followed by a period; secondary headings are to be typed in lower case with the initial letter of main words capitalized and each word in the heading underlined. Tertiary headings appear at the beginning of a paragraph, followed by a period and a dash.

**FOOTNOTES.** Footnotes to tables are permissible as described above. Reference to the literature is not permitted as footnotes but must be handled as described below. Acknowledgments are incorporated in the regular text at the end of the manuscript. References to literature should be incorporated in the list of references in the order corresponding with the authors' names.
