Title: Front Matter

Issue Date: May-1924

Publisher: Ohio State University, College of Engineering

Citation: Ohio State Engineer, vol. 7, no. 4 (May, 1924), 1-4.

URI: http://hdl.handle.net/1811/33632

Appears in Collections: Ohio State Engineer: Volume 7, no. 4 (May, 1924)
Casadero Hydro-Electric Plant on the Clackamas River, Oregon

MAY, 1924

OHIO STATE UNIVERSITY
IN the bank building the architect has sought always to express the ideal of dignity: the engineer has expressed the ideal of stability. Architect and engineer together have made of the American business building a co-ordination of design, construction and equipment that is a world criterion. Each year finds the American business building anticipating even more remarkable developments in the near future. Certainly modern invention—modern engineering skill and organization, will prove more than equal to the demands of the architecture of the future.

The man of many sides

who has given America new beauty

HATS off to the American Architect and Engineer; he has done a great work for his country.

He has changed our drab cities into marvels of stone, brick, and marble and sent their graceful spires heavenward in a new school of architecture typical of our time and people. He has housed our industry in palaces of glass and iron dedicated to safety and sanitation.

And he has made the oddly designed residence of twenty years ago a laughable memory.

Beauty that is permanent

Nor does the architect and engineer of today confine himself to the beauty of design; he has a broad and intimate knowledge of materials—he builds for permanence.

If he gets pleasing effects with stone he gets strength as well. He knows brick not merely for its decorative value but also for its endurance. The charm of a grain cannot hide from him the wearing quality of wood.

He is an expert judge of every material that goes into the making of a building—be it skyscraper, factory, or cottage. That is why architects and engineers, the country over, specify ARMCO Ingot Iron wherever special service is required from sheet metal.

For window frames, ventilating systems, roofing, cornices, gutters and down spouts, metal lath, skylights, tanks, stacks—wherever exposure to weather makes dense, uniform, and long-lasting iron desirable, there you will find Ingot Iron written into the specifications.

What ARMCO Ingot Iron is

Ingot Iron is iron from which almost all rust-promoting impurities have been eliminated. It is comparable in purity to the "old-fashioned" iron roofing—such iron as our forefathers made by painstaking hand methods. Owing to this high purity, zinc coating adheres more tenaciously to Ingot Iron than to ordinary sheet metal.

In addition, Ingot Iron is uniformly dense in structure, ductile, easy to work, and is lasting to an extraordinary degree.

Look for the Armco Label

You can identify articles manufactured of ARMCO Ingot Iron by the blue and gold Armco label. This label is your guarantee of excellence. ARMCO Ingot Iron in sheet form can be identified by the blue Armco triangle, stamped on every sheet before it leaves the mills.

Greater simplicity and reduced weight are fundamentals of mechanical refinement. The constant tendency toward simpler, lighter machinery of all kinds is accelerated by the ever-increasing use of Timken Tapered Roller Bearings.

Their design is inherently adapted for Dual Duty — the carrying of radial loads and thrust loads and resultant loads simultaneously. By taking advantage of this multiple ability of Timkens the designing engineer avoids much more complicated construction otherwise needed to do the work. With Timkens he immediately reduces the number of parts and consequently he eliminates excess weight.

And since the Timken principle also permits greatest load to be carried per unit of space required, Timken mountings are most compact, so that housings are smaller. When any one housing or unit may be made smaller and lighter, all related parts in turn may be similarly refined. Thus Timkens, in themselves a refinement, favorably influence the entire mechanism in which they are used.

And Timken influence in bettering a machine never ceases, because when that wear which eventually must follow motion does come, its deteriorating effects need not be tolerated in Timken-equipped mechanisms. Timkens can be adjusted to function as when new.
