**THE ENGINEERS' PATTERN**

Popular with the engineers. A ¾" wide extra heavy steel tape in substantial metal-lined leather case. Also furnished in open disc reel and open metal frame.
Finish, Accuracy and Balance

are the three cardinal features of "Chicago" Drawing Instruments. So thoroughly are the standards maintained that any part of any instrument is interchangeable with the like part. Months or years may intervene between the time of manufacture, yet each part will be a duplicate of every other one like it.

The man in charge of our drawing instrument department has directed the manufacture of drawing instruments in the best known factories of Europe.

This knowledge and experience, coupled with carefully selected high grade workmen, is why Pease American Made Drawing Instruments, improved by modern American methods of manufacture, contain precision, balance and durability to the nth degree. They have no peer anywhere in the world and will last a lifetime.

Pease drawing instruments have proved popular in educational institutions, for students are rapidly realizing the value of purchasing only high grade instruments.

Auger Brick Machine

One pinion, one gear, two shafts; detachable thrust bearing. As accessible as a brick machine can be built. We also build the Union Machine—an augur machine and a pug mill in one construction.

Rotating Automatic Cutter

Producing the highest grade face brick, without repressing. Equally satisfactory for commons and pavers. Several hundred in successful operation.

We manufacture a complete line of auger machinery, having given our attention exclusively to this one class of machinery for over forty years.

BUNTING

BUSHING

BEARINGS

THE engineer who brings truely complete capacity to his task, bears always in mind the value of accessibility of materials and parts.

That is why so many engineers select the bronze bushing bearings from Bunting's stock list of 269 sizes of "Ready-Made" Bushing Bearings. The reason being—"They're always in stock."

Helps to Success

The Units of Equipment which Help, rather than Hinder, in the successful completion of any work, are those of correct design and careful building.

Units produced by The Hadfield—Penfield Steel Co., of Bucyrus, O., are so built and include—

**Diesel Engines**  
**Gasoline Locomotives**  
**Clay Products and Cement Machinery**  
**One Man Graders for Fordsons**  
**Crawler Tracks for Fordsons**  
**Manganese Steel—“ERA” Brand**

**DIESEL ENGINES**—Product as much power on one car of oil as can be developed from ten cars of coal under boilers. No shoveling of coal or ashes. One-tenth freight. Cost starts when work starts.

**GASOLINE LOCOMOTIVES**—Built in several sizes. Economic motive power at minimum cost. No skilled help. Low upkeep cost.

**CLAY WORKING MACHINERY**—Full equipment for making every product made of clay. Also cement machinery.

**ONE MAN GRADER**—Attaches to a Fordson in an hour. One man cuts grading cost to one-fourth. Grades, scrapes, ditches, removes snow.

**CRAWLER TRACKS**—Make a Crawler of any Fordson. Doubles its pulling power. Goes anywhere. Ford service and low upkeep.

**MANGANESE STEEL**—For repair parts “ERA” brand has no equal. Extra life without extra cost.

We have other activities and invite correspondence.

BUCYRUS, OHIO
Are you going to be a "drop-forged" engineer?

There are thousands of that kind and, soon or late, they learn with a shock that they can get just about so far, and no further.

THREE big eastern university engineering societies held a joint meeting recently. They were alumni men of technical colleges. And they met to discuss the outlook of the college trained engineer.

"The trouble," said a speaker, "is that too many of us are 'drop-forged' engineers. We know our profession; but of Business, to which it is so closely related—we just don't know what it's all about."

In the files of the Alexander Hamilton Institute is the story of a graduate of a great engineering college. With all his training and his degree, he was a "drop-forged" engineer.

"When I left college I did not know the A B C of how to consider even the simplest of business problems," he wrote.

Upon leaving college, he started to work as an engineer for a big technical firm at $70 a month. He is still with that firm. And this is what he writes:

"Today I am part owner of the firm and sole manager of it. This hasn't been due to luck by any means; but simply by putting into practice what anyone can get from the Modern Business Course and Service of the Alexander Hamilton Institute."

It is not enough to know the technical side alone

The director of a western engineering college said recently: "The most dominant characteristic of the engineering profession is the preponderance of the commercial over the technical."

Step by step, the engineering enterprises that achieve big success, and make careers for engineers, are guided by the same fundamental laws and practices that rule modern business. And thousands of engineers have learned by bitter experience that without business training, technical training carries a man just about so far, and no farther.

A Course whose product is understanding

The Alexander Hamilton Institute was founded by a group of business men and educators who realized that modern business was developing specialists, but not executives; that somehow more men must be taught the fundamentals that underlie the operations of every department of business.

The Institute has only one Course. It takes a man out of college and gives him a working knowledge of all the departments of business.

The Course has two parts—reading and Service. A man can do the reading at home, or the Service can be followed in the College, or a Branch, or even in his own office. The Course has been developed from the experience of thousands of men who have taken it under the various forms it has taken. It is a working knowledge, and not just second-hand. It is a knowledge that will bear the test of practice.

Such a man receives in a few months of reading what ordinarily would consume years of practical experience. He finds in the Institute a more direct path from where he is to where he wants to be.

For the "drop-forged" engineer who asks himself "Where am I going to be five years from now?" the Alexander Hamilton Institute has an encouraging story to tell. It is the story of the thousands of successful college men—many of them engineers—who have saved the wasted years; men who, thru the Course and Service, have added to their technical equipment the training which makes them understand what business is all about.

"Forging Ahead in Business"

"Forging Ahead in Business" is a 116-page book especially prepared for men who are taking stock of their prospects and pondering what the future may hold seriously want to know what the Course has done for others in positions like their own, the book will be a revelation. It will be sent without obligation. Just send the coupon below.

Knowledge of our line of manufacture will surely be of use to you in years to come—for Brown & Sharpe Machines are used in a great many industries. In the small repair shop or in the largest high production manufacturing plant, these machines are being used to do many classes of work. The small shop likes their versatility and ability to stand up under that extraordinary job which often loads the machine beyond its rated capacity. The big plant finds they give production and a product uniformly accurate. Brown & Sharpe Machines are ruggedly constructed and will maintain their accuracy for many years. Investigate their many uses.

Ask your Librarian to show you the Brown & Sharpe books — Catalogue studies—Nos. 29, 29x and 29xx. Our Catalogue No. 137 gives details about our entire line of manufacture.

BROWN & SHARPE MFG. CO.
Providence, R. I., U. S. A.
To Help You to Decide

The manufacture of 100,000,000 blasting caps without a complaint, and 20,000,000 electric blasting caps with only one valid complaint involving a small number, is the present record of our Port Ewen plant. It is a record of which we are not ashamed, and which we are naturally striving to maintain; but after all, the record itself is not the important thing to our customers.

In any process which involves the human factor largely, as does the manufacture, inspection, and testing of blasting caps, perfection is unattainable. The nearness to which it can be approached depends upon the skill and conscientiousness of the workers; and upon the vigilance with which checks are applied by persons, themselves liable to error, upon the performance of others subject to the same liability. This practically perfect record of ours for a certain period should interest customers only as it indicates that our force is able and careful, and that our supervising and testing are accurate.

When a manufacturer can say this, it is difficult truthfully to say more. It then becomes merely a question of degree; for ability, and carefulness, and accuracy are relative terms. We wish it were possible to take all of you who use blasting caps or electric blasting caps through our plant so that you might decide at first hand how far we have traveled towards the impossible goal of perfection in manufacturing. This is not practicable, but to assist you to form your own opinions of this, in succeeding advertisements we shall go behind our record of performance and describe some of the means we use which made the record possible.
What Industry Owes to Engineering

In 1891 the first electric motor was put to work in a steel mill. In 1905 the first large rolling mill motor, and in 1906, the first reversing mill motor were also installed in steel mills. These motors—all Westinghouse Motors—were history-makers in the steel industry.

Other industries too have profited by Westinghouse engineering pioneering.

—in the rubber industry, Westinghouse ideas as originally applied in 1900, are today the standard method of application in plants throughout the world.

—in the handling of materials at the world's great shipping centers, in the manufacturing of paper, in the motion picture industry, in coal mining, in meat packing, railroading, ship building—in fact, in every branch of human activity can be found progress and profits traceable directly to the pioneering of Westinghouse Engineers.

And Others
The initials of a friend

You will find these letters on many tools by which electricity works. They are on great generators used by electric light and power companies; and on lamps that light millions of homes.

They are on big motors that pull railway trains; and on tiny motors that make hard housework easy.

By such tools electricity dispels the dark and lifts heavy burdens from human shoulders. Hence the letters G-E are more than a trademark. They are an emblem of service—the initials of a friend.
