1800 pound steam pressure for an installation which will be the largest high pressure steam plant in the world.

700 percent rating—carried on a unit comprising a Ladd Boiler, C-E Fin Furnace, C-E Air Preheater and Lopulco Pulverized Fuel System.

660,000 pounds of steam per hour from one unit—and, work in progress on three units each capable of delivering 800,000 pounds of steam per hour.

These are outstanding accomplishments

The ability to offer to Industry a service which is not available elsewhere—is responsible for these striking accomplishments.

Complete fuel burning and steam generating units of coordinated design to meet exactly the individual plant need—comprising boiler, stoker or pulverized fuel equipment, furnace, superheater and air preheater—are sold under One Contract, One Responsibility and one set of guarantees.

Our General Condensed Catalog briefly describes Combustion Engineering Corporation equipment. May we send you a copy?

INTERNATIONAL COMBUSTION ENGINEERING CORPORATION
Chicago is a wonder city. It has grown like the proverbial mushroom—prairie giving place to pavement and tall buildings rising on every side.

The Otis organization has contributed in no small degree to this amazing record of growth. In keeping with the fact that “most of the famous buildings of the world are Otis-equipped” Chicago’s major commercial structures reflect the trend toward safe and speedy Vertical Transportation with maximum safety.

State Street, Broadway, Picadilly—every famous street throughout the world—is lined with buildings wherein Otis Elevators are giving daily service in a safe, trouble-free manner—concrete examples of this company’s determination to build nothing but the best—and the best is none too good to bear the world-famous Otis trade mark.
Paving a Highway in the Mountains

UNTIL July, 1927, the Mountain Springs grade was a treacherous ten miles of rocky trail which led out of the Imperial Valley into the mountains of San Diego, California. At that time a concrete highway, 20 feet wide and 7.2 miles in length, was completed. Its elevation variance is approximately 1800 feet making an average grade of 7% with super-elevated curves and a continuous series of alternating reverses.

Unusual conditions — preparing a grade from solid rock formation, long haul of materials, temperature as high as 122° — demanded rugged, dependable equipment. That's one reason why the Koehring Heavy Duty Shovel did all the excavation work — traveling over uneven rock formation.

At the stock pile and batcher bin a Koehring Heavy Duty Crane handled the crushed rock and sand while on the grade a Koehring Heavy Duty Paver mixed the dominant strength concrete, — a complete Koehring-equipped job.
