To the Graduating Class
In Ceramic Engineering

To Engineering
College Graduates

To you men who are graduating this year from the College of Engineering, it should be a source of great satisfaction that you are stepping into a business and industrial world which gives you a more hopeful outlook, and more pleasant prospects than has been the case during the past four years. While the process of getting an education has meant more sacrifice and hardship, since 1930, than it would have in previous years, you are fortunate that you were able to spend these years in college, preparing yourselves for your life work. The clouds of the last four years are beginning to lift, and it is hoped that in after years when you look back upon your college education you will come to the conclusion, that, had you been given a choice of any four years during recent time, you would have selected the four years just past in which to have attended college. I wish you all the best of luck.

E. E. DREESE, Chairman
Department of Electrical Engineering

The faculty of this department sends you into the world with a distinct feeling of pride. With the training which you have received we feel certain that you are better equipped than any class that has preceded you and we feel confident that you will reflect great credit to ceramic engineering at Ohio State University. We hope and expect that you will continue your close contact with the department and allow us to aid you in every way possible.

Sincerely
ARTHUR S. WATTS
JOHN L. CARRUTHERS
R. M. KING
To Industrial Engineers
Entering Industry

Perhaps a few words of practical advice may not be amiss. Do not be discouraged by first impressions of the plant you enter. It will take you three months at least to become "acclimated" and during these three months you will many times feel homesick for the University and the good friends you had.

But if you want to succeed you must stick to it, and make the best of it. My wish to you all is that you may make a success of life not necessarily in the money sense, but in the broad sense that you may be happy in your work.

JOHN YOUNGER, Chairman
Department of Industrial Engineering

To the Mechanical Engineering Seniors

You are just finishing what has been for most of you four years of rather strenuous and concentrated work. Some things which you have been asked to do may have seemed unnecessary to you. We hope, however, that the net result has been to fit you to some extent for the new responsibilities with which, if you are to be successful engineers, you will soon find yourselves faced. If some of you do not immediately find proper opportunities, continued and persistent hunting will doubtless bring success. Remember that our latch string is always out, and be sure to keep us posted concerning your addresses and doings, especially if you think there is a chance of our being of service to you.

F. W. MARQUIS, Chairman
Department of Mechanical Engineering

May, 1934
To Our Graduates of 1934

Engineers graduating from The Ohio State University need have no hesitation about undertaking any job or fear any problem that may be encountered in engineering operations, for no engineers are better trained in any school anywhere. Our graduates hold up their heads in any group, and justifiably so . . . I hope, though, that our men will never forget that they must not be merely the best engineers but also the best citizens in their groups, leaders in all places of society in the things that make for progress in community life and social welfare.

DANA J. DEMOREST, Chairman
Department of Metallurgy

To Senior Students in Mine Engineering

You have completed the task you set for yourself when you came to Ohio State. You have had the opportunity to acquire considerable education. We hope you feel that your years with us at the University have been profitable. Your future education and progress are up to you.

We of the faculty have enjoyed our associations with you. We have watched you develop. We believe that you are now competent to start in your chosen profession. We hope you will be happy in your work and continue to develop. We ask that you add us to the list of your friends with whom you expect to keep in touch and with whom you care to visit.

H. E. NOLD, Chairman
Department of Mine Engineering
To the Graduates of Civil Engineering

Rather than write farewell to seniors the undersigned would rather hear their farewell sentiments. Many did so speak at the Civil Engineers banquet, May 22, after listening to a masterly summary of affairs and prospects by that prince of speakers, Colonel Chevalier. But upon following such a speaker not all would unburden themselves freely.

My parting word is, don't miss a chance in future to exercise any talent you have—it must be developed by exercise. Before going to a dinner, why not prime yourself beforehand with a few remarks, ready upon call. It may be tough on the audience, but you need the practice. More power to you all in the exercise of all your talents!

C. E. SHERMAN
Professor of Civil Engineering
