Did you know that radio broadcasting stations from coast to coast are linked by more than 53,000 miles of special telephone circuits?

Even before the earliest days of broadcasting, Bell System engineers developed means of transmitting sounds of all kinds by wire. These have been improved constantly to transmit the extremely high and low sound frequencies of music and entertainment.

Just as years of telephone research stand back of today's special broadcasting circuits—so the research of today is helping to solve the communications problems of tomorrow.

Another Bell System contribution to your daily life.

BELL TELEPHONE SYSTEM

"ON THE AIR" also means "ON THE WIRE"

How about a telephone call to dad? Rates to most points are lowest any time after 7 P.M. and all day Sunday.

Senior Directory..................................Page 21

THIS MONTH

We have attempted to provide a graduating Senior Directory which we sincerely hope will be of use to many students. Where possible, we have given the names of the companies for which the men will work. We regret that this list is very incomplete and, at best, is complete only until May first.

We regret that interviews were not feasible this year.

NEXT YEAR

we want to make this your magazine. Suggestions and criticism will be welcomed. And we're going to have jokes!

June, 1939
