Theme of the meeting was unifacial blades. Above, the display of Dan Brenneman, who showed that there are at least three varieties of uniface blades. His display included Fluted Points because these flint tools have been found with Paleo tools.

Display by Jeffrey Recinella shows progression of manufacture of a fish hook from a deer metapodial. Fluted point at left, of Flint Ridge flint, was found by Thomas Stopki in Carroll County in 1971. Coshocton point at right was found in Jefferson County.

David Raymond spoke about petroglyphs. He explained that because of erosion, petroglyphs from the Archaic period have long ago eroded into oblivion, and that many have weathered away within the last 100 years.
Hematite was the theme of the March meeting of the Archaeological Society of Ohio. John Mocic of Dilles Bottom, Ohio, presented his comprehensive display of artifacts made of hematite, which included celts, bannerstones, plummets and pendants.

Speaker Nigel Brush discussed the apparent lack of occupation of rock shelters during the Paleo Period. Pictured is the base of the only fluted point he ever recovered from a rock shelter. Brush stated that he would be interested in hearing from anyone with further information on the subject.
