

ADDITIONS TO THE FLORA OF CEDAR POINT. III.*

MALCOLM M. STICKNEY, JOHN H. SCHAFFNER, and CLARA A. DAVIES.

A list of the plants of Cedar Point was published by Kellerman and Jennings in June, 1904 (OHIO NATURALIST 6:186-190). This list included the species represented in the Cedar Point Herbarium belonging to the Lake Laboratory and additional names taken from Moseley's "Sandusky Flora" and other sources.

The first list of additions was published by Kellerman and York in the OHIO NATURALIST (6:540) and a second addition was made by Jennings in the OHIO NATURALIST (6:544-545).

During the summer of 1908 rather extensive collections were made by Professor Stickney and Miss Davies, many species proving new to the Cedar Point flora, and in the past summer further additions were made by each of the three authors of the present paper. In the interests of simplicity it was thought advisable to publish all these latter additions in a single paper. Following our list is an additional one made up from records made by Professor E. L. Moseley who kindly placed his field notes at our disposal. This list represents plants which have not been reported in any of the previous publications,

With careful collecting for one or two seasons more, our knowledge of the flora of Cedar Point should be fairly complete, and a revised general catalogue should then be published, since a local list will be of considerable value in the botanical work carried on at the Lake Laboratory.

Abutilon abutilon (L.) Rusby.	Clematis virginiana L.
