## NOVEL OIL WELL CAMERA

Introduced recently at the famous Signal Hill oil fields near Los Angeles, was a novel oil well camera, whose underground eye records the exact course of a hole besides enabling the driller to direct the shafts. The construction of the camera is being kept secret at the present time, but experts have admitted that the information provided by accurate photographic records will be worth millions of dollars to the oil industry. The camera has dispelled the former assumption that an oil well goes straight down.
