MAN-POWER ENERGY
CREATING MACHINE
FOR AIR PLANES

FROM:
C. F. BLUSKA
inventor,
1257
LYCASTE,
Detroit
Michigan

First:
Here is My Energy Creating
Machine for Man-Power
Air planes. Many machines
put together, 4 put at 8,
one man creates the
Power of 48 men.
As shown,
Lever 2, counteracts
at arm 9,
The space below
at 3, gives the
crank 10, a
Power action
works up and
down.

NOTE
I will soon
show all of
my great
machines to
the public
leader in
action will
show them
in person

The Machine forms a
right Balance two pounds
at 4, balanced 2 pounds
at 5, with 6 inches travel at
4, and 12 inches travel at 5.
By moving it up and down it
seems as if there was no
weight on it, moved by touch
of your finger. 100 percent of
gain of energy created.
See NEW WINGS and NEW POWER
for man-Power Air planes.
Let me know, I'll send it to you,
you can teach other universities
to stop teaching other universities.
Scientists still work on ATOMIC ENERGY,
it's against NATURE. Poor gain of energy.
*I blame teachers for this WAR.
not our Government for not
teaching the
LIFE-TRUTH.

I hope Sci. lists
this not as a
joke. I was
laid down on this
paper, and drawn.
As shown on the
printed paper, this
machine was patented
in Canada, long ago.
Scientists made a
mistake in figuring
out ANGULAR-MOTION
and counteraction.
I consider it
my FLAG.
You made it, not
I made it. I know the
WORKER IS THE
Boss.

ENERGY CREATING MACHINE

(This sketch was received by Dean MacQuigg with the request that it be made public so that students would know of the errors of their learning.)

"The V-shape Energy Machine was made for bicycles, but is better for motors," claims C. F. Bluska, inventor from Detroit, Michigan. Using the principle of the V-shape Energy Machine, he formulated plans for a Man-Power Energy Creating Machine for Airplanes. Dean McQuigg received the plans for this machine and a copy of it is pictured above.

Bluska explains that when 4 is put at 8, one man is able to create the power of 48 men. Lever 2 counteracts at arm 9. The space below at 3 gives the crank 10 a power action of up and down motion. The machine forms a right balance. Two pounds at 4 balances 2 pounds at 5 with 6 inches travel at 4 and 12 inches travel at 5. By moving it up and down it seems as if there is no weight on it, and it can be moved by the touch of your finger. Thus 100% of gain of energy is created.

"Scientists still work on atomic energy; it's against nature," says Bluska. "Scientists made a mistake in figuring out 'angular motion'. They hide behind a 'bush' for the old teaching of physics is broken up. These are mathematical facts.

Long leverage becomes invisible at engine." On the basis of these arguments, Bluska suggests that the universities cease teaching "lies" to the students.

"Some day we'll fly in airships by manpower, by pushing on a little lever, and cook, and heat at \$2.00 a year," predicts Bluska.
