INSTITUTION AND CORPORATION MEMBERS
OF
THE OHIO ACADEMY OF SCIENCE

The Ohio Academy of Science wishes to take this opportunity to acquaint
the membership with the following Corporation and Institution Members. The membership should be aware of the vital role played by these corporations and institutions in aiding the Academy to subsidize research, to disseminate newly discovered scientific information through its Ohio Journal of Science, and to support the work of the Junior Academy. The annual membership fee of $100.00 paid by each of these corporations and institutions has allowed the Academy to expand its enormously successful Junior Academy program which is directed toward interesting and encouraging high school students in scientific careers.

The Academy and its agencies, the Junior Division, and The Ohio Journal of Science thank these corporation and institution members for their continued interest and financial assistance.

*University of Cincinnati
Western Reserve University
*Wittenberg University

*Membership of ten years or more.
†The Academy is pleased to announce and welcome these new Corporation members.
New Versatility in the field of fluorometry

**Turner Model 110 Fluorometer**

In addition to routine fluorometric analyses, the Turner Model 110 Fluorometer permits maximum application in the far UV (quartz) range by allowing 2-minute interchange of lamps. Interchangeable holders for fused uranium pellet assays, continuous flow cuvettes, solid samples and paper chromatograms are available. Small and compact, unit is ideal for analyses of insecticides and insecticide residues, the entire field of industrial toxicology, air pollution studies and tracer technics.

No. 68450A—Turner Model 110 Fluorometer . . . $985.00

Turner Model 111 for use with standard recorders is also available.

For full details on fluorometric analyses, contact your local S/P Representative.

Turtox Micro-Replica Kits

320A905 Micro-Replica Kit for Surface Details. This simple and easily used kit permits any teacher or student to produce in minute detail permanent microcasts of surfaces of leaves and stems, of plants, epidermis of animals, etc. to show cells, fibers, hair, etc. in three-dimensional relief. The resulting coverslip casts, when studied under the microscope, show details never seen in ordinary microscope slide preparations.

The technique is simple and rapid. The finished replicas, which show surface structures with startling relief and clarity, are fastened (with Scotch tape) to standard 3x1 inch slides to facilitate viewing and integration with the regular microscope slide collection.

Set consists of a box of one hundred plastic micro cover slips, a 4-ounce bottle of solvent, and a detailed and illustrated instruction leaflet.

Kit ........................................ $ 2.00
Dozen kits .................................. 22.00

320A908 Snow Flake Replica Kit. This interesting kit contains sufficient material to make hundreds of permanent replicas of actual snow flakes. The resulting detail is sufficiently fine for critical microscopic examination.

Kit consists of bottle of solution, glass applicator, and a leaflet of detailed instructions.

Kit ........................................ $ 2.00
Dozen kits .................................. 22.00
