

---

TWO NEW SPIDER RECORDS FOR OHIO.<sup>1</sup>—Specimens of the following two species were collected by me during a survey (1962–63) of the spiders of northeastern Ohio and have not been previously recorded for the state. Identification of the species was made by keys and descriptions in Kaston (1948).

*Ero furcata* (Villers, 1789). (Mimetidae). 2 ♀ ♀; 12-ix-1962; collected by sweeping herbaceous vegetation 1 mile west of Rt. 43 on Fairchild Rd., (Portage Co.). This species appears to be Holarctic in distribution (Bonnet, 1956).

*Scytodes thoracica* (Latreille, 1802). (Scytodidae). 1 ♀, 23-iv-1962; 1 immature, 16-ix-1963; collected in 2 different buildings in Kent, Ohio (Portage Co.). This is a cosmopolitan species of a predominately tropical and subtropical family (Bonnet, 1958).

The specimens are deposited in the Entomology Museum of The Ohio State University.—THEODORE W. SUMAN, *Department of Biology, Kent State University, Kent, Ohio.*<sup>2</sup>

<sup>1</sup>Extracted from a thesis submitted to the Graduate School in partial fulfillment of the requirements for the degree Master of Arts, Kent State University, Kent, Ohio.

<sup>2</sup>Present address: Department of Entomology, Bishop Museum, Honolulu, Hawaii 96819.
