

COMMENTARIES

I/S welcomes the opportunity to publish shorter essays that are less formal than research articles, and perhaps more oriented towards advocacy, as well as analysis. We publish such essays as "Commentaries." The legal and policy issues surrounding information and communications technologies evolve so quickly that scholars and other experts may find they have ideas they wish to share in a more tentative mode or with less elaboration than a full-blown research article typically entails. We also recognize that readers may benefit from having access through I/S to well-crafted advocacy pieces from well-known scholars and practitioners. We believe a venue for commentaries of this kind can make a distinct contribution to ongoing intellectual debates, especially if they offer original insights or perspectives, and combine advocacy with a level of analytic rigor and clarity worthy of serious debate.
