**Introduction**

Interfaces

Papers by Arnold M. Zwicky

The papers collected here concern the interfaces between various components of grammar (semantics, syntax, morphology, and phonology) and between grammar itself and various extragrammatical domains. They have two (overlapping) sources: some are earlier manuscripts that have for one reason or another failed to reach print (these I have left essentially in their original forms), and some are drafts of work in progress. Asterisked notes provide more specific information about the history of each paper.
