The New 1956 Turtox Domestic and Foreign Want Lists

These lists describe hundreds of plant and animal specimens that we wish to purchase and state the price we offer for each. If you have biological material for sale, or if you are interested in collecting for us, write for the 1956 Want List.

If you live in the United States or Canada, ask for the 1956 Turtox Domestic Want List. If you live in any other country, write to us via air mail and ask for the 1956 Turtox Foreign Want List.

**AO STEREOSCOPIC
MICROSCOPE WITH
NEW EPOXY FINISH**

Now, in addition to erect 3 dimensional images, and interchangeable objectives — new EPOXY FINISH! Pleasing dove-gray color, harder, resists chemical deterioration, abrasion and mechanical impact.

**AO BAKER INTERFERENCE
MICROSCOPE**

Unique combination of double beam interferometer and polarizing microscope. Dramatically provides for the precise examination of transparent specimens where detail is exhibited by variations in thickness or refractive index.

AO MICROMANIPULATOR

For cellular research. Precise beyond the resolution power of modern compound microscopes. Up to four micro-tools in microscopic field at same time.

Fishing with Natural Insects

by ALVAH PETERSON,
Professor of Entomology,
The Ohio State University,
Columbus 10, Ohio

**Chiefly a Handbook of Insects for Bait Use
Non-technical and Extensively Illustrated**

SOME TOPICS DISCUSSED

- Some essential facts about insects.
- Life and habits of more than sixty kinds of bait insects with photographs.
- Collecting, trapping, rearing, maintaining, and preserving bait insects with illustrations.
- A bait calendar.
- Insects for winter and ice fishing.
- Some lures that resemble insects.
- Location, natural food and bait insects for twenty-five common pan and game fishes.

PREPARATION OF MANUSCRIPTS FOR PUBLICATION IN THE OHIO JOURNAL OF SCIENCE

The following suggestions are presented in order to minimize revisions and editorial corrections. Uniformity of style and format necessitates attention to detail by authors even though many points may seem arbitrary. The cooperation of authors in the preparation of manuscripts will permit the publication of greater numbers of papers with the limited funds available.

STYLE. Recent issues of the Journal should be examined so that authors become familiar with its general style. Manuscripts should be neatly typewritten on 8½ X 11 inch paper with wide margins and double-spacing throughout, including title, footnotes, quotations, tables, literature cited, headings, and legends. Pages should be numbered consecutively. Extensive quotations in the text should be typed with slightly wider margins. Words and numerals to appear in italics should be underlined in the typed copy.

Leave a 3-inch margin at the top of the first page above the title. Title is to be typed in capital letters. Scientific names of organisms in the title should be underlined. The author's name should be typed in capital letters below the title. The address of the department, institution, city and state which are to be credited with supporting the author and his work should be typed (caps and lower case) below the author's name and underlined. If more than one institution is to be credited, their names should appear in the order corresponding with the authors' names.

Main headings are to be typed in capital letters, centered and not followed by a period; sub-headings are to be typed in lower case with the initial letter of main words capitalized and each word in the heading underlined. Sub-headings may be centered or located at the beginning of a paragraph. When a sub-heading appears at the beginning of a paragraph, it is followed by a period and may be numbered. Text should begin below the author's address. Do not use a separate title page.

TABLES. Tables are to be typed, double-spaced, on separate sheets of paper, one table to a page, numbered consecutively, and placed in a group at the end of the manuscript. The reason for this is that the type in tables is set by hand and the tables are therefore separated from the regular text by the printer. Keep the number of tables at a minimum; numerous small tables especially should be avoided. When the headings for a number of tables are similar, an attempt should be made to combine the tabular data thereby avoiding numerous repetition of the same heading. Use a double horizontal line immediately below the title of the table and a single horizontal line below the column headings and at the bottom of the table. Do not use horizontal lines in the interior of the table. Use no vertical lines.

Footnotes to tabular data should be noted by asterisks, daggers, or other signs to avoid confusion with numerals in the table and with numbered footnotes elsewhere. The general style desired in tables can be seen by examining recent issues of the Journal.

The position of the tables in the text as preferred by the author should be indicated on the galley proof. Tables are referred to in the text as "table 1" or "(table 1)."

ILLUSTRATIONS. All illustrations are referred to as "figures" and should be numbered consecutively. They may be photographs or line drawings in black India ink. Each figure or collection of figures in a plate should be identified along the bottom edge with *author's name, figure number, and size after reproduction*, and on the back with *author's name and title of manuscript*. Figures should be identified by unique consecutive numbers. Use of illustrations not original with the author must bear permission for use and credit to the originator. As many as possible of the illustrations should be grouped and mounted close together on heavy white cardboard for reproduction as a single cut. Grouping is economical because the photo-engravers charge for one-half page is about three-quarters of that for a full page and his minimum charge for small figures is about one-half that of a full page. Care should be taken to insure that a figure does not occupy any more space than necessary. Excessive white space should be eliminated.

Make the size and proportions of each group of illustrations suitable for reduction to the width of the printed page (4½") and any portion of the length (7½"). Line drawings for reproductions are often made too large. As a general rule the dimensions should be no greater than 9 X 15 inches. If carefully drawn they need be no more than 50 percent larger than the size desired when in print. Original drawings should be submitted for making engravings. In addition to the original illustrations, a photographic copy of each (no larger than 8½ X 11 inches) should accompany the manuscript to facilitate transmissal of the manuscript to the reviewers.

Magnifications stated in the figures or in the explanation of the figures should refer to the magnification after reduction. Or a scale may be drawn on the figure which will automatically indicate the size of the original regardless of reduction.

Explanation of single figures should be typed, double-spaced, in a list on a separate sheet of paper included with the manuscript to go to the printer. They should not be affixed to the figure which goes to the engraver.

Explanation of figures assembled together in a plate may be typed, double-spaced, on a separate sheet of paper with the heading EXPLANATION OF FIGURES IN PLATE. Figures are referred to in the text as "figure 1" or "(fig. 1)."

FOOTNOTES. Text footnotes should be avoided if at all possible. Reference to the literature is not permitted as a footnote but must be placed in the section on *References* or *Literature Cited*. Acknowledgments are incorporated in the regular text at the end of the summary, just before the literature cited.

If text footnotes must be used they should be typed, double-spaced, in sequence on a separate sheet of paper and put at the end of the manuscript. They are referred to by means of superscript numerals.

Two kinds of text footnotes are permissible. A footnote on the title of the article may be used for a statement such as "Department publication 522," or "Part of a dissertation submitted in partial fulfillment . . ." A footnote on the author's name may be used for a statement such as "Present address . . ." or "Fellow of the . . ."

REFERENCES or LITERATURE CITED. References to scientific literature should be accumulated in a list, arranged alphabetically by author's last name, and typed, double-spaced, on a separate sheet of paper at the end of the text. The page should be entitled REFERENCES or LITERATURE CITED, typed in caps and centered. Examine recent issues of the Journal for the detailed form. References are referred to in the text as Paterson (1940) or (Paterson, 1940).

A Vividly Illustrated, Functional Text . . .

Just Published!

GENERAL BOTANY

by WILLIAM T. TAYLOR AND RICHARD J. WEBER,
Professors of Biology, *Georgetown University*
Illustrations by Wilma Riley

The crisp narrative and unequalled illustrations of this exciting new text will catch and hold your students' interest throughout the introductory course in botany. The textual material is made concrete and visually alive by the graphic drawings, many of them in three dimensions. Because physiology and morphology are perfectly blended, plant organisms are described exactly as they occur in macroscopic or microscopic aspect. The presentation never slips into a tedious cataloguing of types.

■ A thoroughly modern concept of the plant cell.

■ A lucid description of osmotic pressure and turgor pressure.

■ The most recent experimental evidence on equational cell division—with three dimensional drawings of all its phases.

■ A real insight into the nature of photosynthesis and respiration.

■ Plant metabolism in Clear and simple terms that your students will grasp.

■ A treatment of algae and fungi unequalled in rival introductory texts.

■ Chapters on plant genetics and plant evolution to extend your students' horizons.

■ Open questions that outline current knowledge and suggest future investigations.
