Back Matter
ENROLL A NEW MEMBER

The Ohio Academy of Science was organized on December 31, 1891, at Columbus, was incorporated on March 12, 1892, and became affiliated with the American Association for the Advancement of Science early in 1920. Its membership has grown from 59 charter members to more than 1200. The membership is representative of the educational and scientific institutions of the State and includes quite a number of persons outside the State.

AIMS—According to the Constitution: "The objectives of this Academy shall be the stimulation of interest in the sciences, recognition of merit, promotion of research, improvement of instruction in the sciences, and the dissemination of scientific knowledge." In addition to research and publication, the Academy aids in securing legislation which is favorable to scientific projects, as conservation, topographic and geologic survey, and in other important scientific projects.

MEMBERSHIP—Membership is open to all persons interested in science. Members engaged in scientific work may be elected "fellows." Each member receives The Ohio Journal of Science and the publications of The Ohio Biological Survey for the regular annual dues of $3.00. Institution and corporation memberships are open to organizations in the state which are interested in science and in the support of the objectives of the Academy.

SECTIONS—Each member is enrolled in one section for voting purposes, but is privileged to participate in the program of any section. To avoid excessive subdivision into sections as new fields of research develop, symposia which may cut across several fields of interest are scheduled at the annual meeting at hours which permit attendance of persons from various sections. Sections are listed below.

A—Zoology D—Medical Sciences H—Science Education
B—Plant Sciences E—Physics & Astronomy I—Anthropology & Sociology
A B—Subsection on Genetics F—Geography J—Conservation
C—Geology G—Chemistry

MEETINGS—Annual meetings are held at a time and place fixed by the Executive Committee and the Council on the basis of invitations extended by educational institutions presented at the previous annual meeting. A regional plan is followed, so all areas of the state are covered over a period of several years. In addition to the program of scientific addresses and papers, field trips are frequently arranged.

OFFICIAL ORGAN—From 1892 to 1903, the Journal of the Cincinnati Society of Natural History and the technical series of Bulletins of the Ohio Experiment Station were the official organs of the Academy; in 1903 the Ohio Naturalist was made the official organ and continued as such until 1915 when the Ohio Journal of Science became the official organ. Its columns are open to members of the Academy for special contributions, subject to acceptance by the Editorial Board. Articles in all scientific areas appear in the Journal.

RESEARCH FUND—From 1898 to 1922, through the generosity of M. Emerson MacMillan, of New York, a fund was available annually for encouragement of research among the Academy members. An accumulation from this grant together with the annual grant from the A.A.A.S. makes grants for research available to Academy members. This fund is administered by a committee known as the Trustees of the Research Fund.

INFORMATION—Requests for information concerning any part of the Academy program should be addressed to the Secretary, who will either send a reply or will forward the request to the proper person for reply. The current Secretary is:

Dr. R. W. Dexter, Kent State University, Kent, Ohio.

THE OHIO ACADEMY OF SCIENCE
(Affiliated with the A.A.A.S.)

I desire to become a Member of the Ohio Academy of Science. It is understood that my membership will begin immediately. Dues are $3.00 for current year, Jan. 1 to Dec. 31, with all copies of The Ohio Journal of Science for the year.

Application dated before July 1, $3.00 dues for current year, Jan. 1 to Dec. 31, with all copies of The Ohio Journal of Science for the year.

Application dated after July 1, check one option:

☐ $3.00 dues for current year, Jan. 1 to Dec. 31, with all copies of The Ohio Journal of Science for the year; or
☐ $1.50 dues for last half of current year, July 1 to Dec. 31, with copies of The Ohio Journal of Science for last six months only.

3. Corporation and Institution Memberships—$25.00 dues for current year with copies of The Ohio Journal of Science for the year.

Dr. Mr.
Name Miss Mrs. (Circle title preferred. Please print name)
Corp. Inst.
Address City (Print preferred mailing address)

Institution Affiliation

I wish to enroll and vote in Section (one section only—see above).

*Make check payable to The Ohio Academy of Science, and mail to Dr. E. F. Paddock, Treasurer, Botany and Zoology Bldg., The Ohio State University, Columbus 10, Ohio.
TURTOX Nets and Field Collecting Equipment

Turtox manufactures field collecting equipment for every need. Write for descriptive literature.

The following suggestions are presented in order to minimize revisions and editorial corrections. Uniformity of style and proper attention to detail by authors even though many points may seem arbitrary. The cooperation of authors in the preparation of manuscripts will permit the publication of greater numbers of papers with the limited funds available.

**STYLE.** Recent issues of the Journal should be examined so that authors become familiar with its general style. Manuscripts should be neatly typewritten on 8½ X 11 inch paper with wide margins and double-spacing throughout, including title, footnotes, quotations, tables, literature cited, headings, and legends. Pages should be numbered consecutively. Extensive quotations in the text should be typed with slightly wider margins. Words and numerals to appear in italics should be underlined in the typed copy.

Leave a 3-inch margin at the top of the first page above the title. Title is to be typed in capital letters. Scientific names of organisms in the title should be underlined. The author’s name should be typed in capital letters below the title. The address of the department, institution, city and state which are to be credited with supporting the author and his work should be typed (caps and lower case) below the author’s name and underlined. If more than one institution is to be credited, their names should appear in the order corresponding with the authors’ names.

Main headings are to be typed in capital letters, centered and not followed by a period; sub-headings are to be typed in lower case with the initial letter of main words capitalized and each word in the heading underlined. Sub-headings may be centered or located at the beginning of a paragraph. When a sub-heading appears at the beginning of a paragraph, it is followed by a period and may be numbered. Text should begin below the author’s address. Do not use a separate title page.

**TABLES.** Tables are to be typed, double-spaced, on separate sheets of paper, one table to a page, numbered consecutively, and placed in a group at the end of the manuscript. The reason for this is that the type in tables is set by hand and the tables are therefore separated from the regular text by the printer. Keep the number of tables at a minimum; numerous small tables especially should be avoided. When the headings for a number of tables are similar, an attempt should be made to combine the tabular data thereby avoiding numerous repetition of the same heading. Use a double horizontal line immediately below the title of the table and a single horizontal line below the column headings and at the bottom of the table. Do not use horizontal lines in the interior of the table. Use no vertical lines.

Footnotes to tabular data should be noted by asterisks, daggers, or other signs to avoid confusion with numerals in the table and with numbered footnotes elsewhere. The general style desired in tables can be seen by examining recent issues of the Journal.

The position of the tables in the text as preferred by the author should be indicated on the galley proof. Tables are referred to in the text as “table 1 or ‘(table 1).’”

**ILLUSTRATIONS.** All illustrations are referred to as “figures” and should be numbered consecutively. They may be photographs or line drawings in black India ink. Each figure or collection of figures in a plate should be identified along the bottom edge with author’s name, figure number, and size after reproduction, and on the back with author’s name and title of manuscript. Figures should be identified by unique consecutive numbers. Use of illustrations not original with the author must bear permission for use and credit to the originator. As many as possible of the illustrations should be grouped and mounted close together on heavy white cardboard for reproduction as a single cut. Grouping is economical because the photo-engravers charge for one-half page is about three-quarters of that for a full page and his minimum charge for small figures is about one-half that of a full page. Care should be taken to insure that a figure does not occupy any more space than necessary. Excessive white space should be eliminated.

Make the size and proportions of each group of illustrations suitable for reduction to the width of the printed page (4½”) and any portion of the length (7½”). Line drawings for reproductions are often made too large. As a general rule the dimensions should be no greater than 9 X 15 inches. If carefully drawn they need be no more than 60 percent larger than the size desired when in print. Original drawings should be submitted for making engravings. In addition to the original illustrations, a photographic copy of each (no larger than 8½ X 11 inches) should accompany the manuscript to facilitate transmissal of the manuscript to the reviewers.

Magnifications stated in the figures or in the explanation of the figures should refer to the magnification after reduction. Or a scale may be drawn on the figure which will automatically indicate the size of the original regardless of reduction.

Explanation of single figures should be typed, double-spaced, in a list on a separate sheet of paper included with the manuscript to go to the printer. They should not be affixed to the figure which goes to the engraver.

Explanation of figures assembled together in a plate may be typed, double-spaced, on a separate sheet of paper with the heading EXPLANATION OF FIGURES IN PLATE. Figures are referred to in the text as “figure 1” or “(fig. 1).”

**FOOTNOTES.** Text footnotes should be avoided if at all possible. Reference to the literature is not permitted as a footnote but must be placed in the section on References or Literature Cited. Acknowledgments are incorporated in the regular text at the end of the summary, just before the literature cited.

If text footnotes must be used they should be typed, double-spaced, in sequence on a separate sheet of paper and put at the end of the manuscript. They are referred to by means of superscript numerals.

Two kinds of text footnotes are permissible. A footnote on the title of the article may be used for a statement such as “Department publication 522,” or “Part of a dissertation submitted in partial fulfillment ...” A footnote on the author’s name may be used for a statement such as “Present address . . .” or “Pellow of the . . .”

**REFERENCES or LITERATURE CITED.** References to scientific literature should be accumulated in a list, arranged alphabetically by author’s last name, and typed, double-spaced, on a separate sheet of paper at the end of the text. The page should be entitled REFERENCES or LITERATURE CITED, typed in caps and centered. Examine recent issues of the Journal for the detailed form. References are referred to in the text as Paterson (1940) or (Paterson, 1940).
SVE
SEOSCOPE
MICROPROJECTOR

for study of "Live" or inanimate science specimens

Designed especially for classroom use, the Seoscope takes the place of individual microscopes for group study requiring low magnification, and provides these added advantages:

- Only one specimen required for class study.
- The teacher knows what the class is seeing and can point out special-interest areas.
- Specimen may be projected on screen or on built-in 8-inch base area.
- More specimens can be shown in class period than is possible with individual microscopes. The entire class views the same specimen at the same time!

25mm, 16mm and 10mm lenses (standard equipment) provide magnification up to 50 times on base area; up to 32 times for each foot of projection to screen. Easy to use polarizing set included. Complete, with 3 objectives as above, Polaroid set, plastic cover..............$139.50
