
Meeting of the Wheaton Club.

The Club met Monday evening, March the 16th, in Biological Hall. After a short business session the Club proceeded to an examination and discussion of the list of earliest spring migrations for Columbus, published in the February NATURALIST. Comparison with the migration dates of Dr. Wheaton showed in most cases a close connection, although there were several records differing quite widely. The record of the kingbird, *Tyrannus tyrannus*, was found to be based on a mistake in the records of the Club. Discussion brought out the fact that several of the dates given were antedated by observations of the members which had not been reported and were therefore not available when the list was made up. The new records are given below :

Barn Swallow, April 14.	Whip-poor-will, April 29.
Rose-breasted Grosbeak, April 22.	Kentucky Warbler, April 30.
Orange-crowned Warbler, April 22.	Great-crested Flycatcher, April 29.
Maryland Yellow-throat, April 20.	Black-billed Cuckoo, May 5.
Rough-winged Swallow, April 24.	Blue-headed Vireo, April 30.
Olive-backed Thrush, April 26.	Prothonotory Warbler, April 28.
Warbling Vireo, April 20.	Yellow-billed Cuckoo, April 27.

After the discussion, reports of personal observations were made, Mr. Dawson reporting the Goshawk for March 15th. The Club then adjourned to meet April 20th.

WALTER J. DERBY, *Secretary*.
