
Grain Pests

This authoritative book fulfills a definite need in economic entomology by bringing together all the information on a subject which heretofore has not been treated in this manner. It is written by one who has many years of experience in the experimental work conducted for the control of stored product pests.

The contents of the book is as follows, by chapters: The Insect Pests of Stored Grain and Milled Cereals; Controlling Stored Grain Insects on the Farm; Control of Insects in Grain Stored in Elevators and Warehouses; The Insect Problem in Flour Mills; Practical Control Methods in the Mill; Protecting Flour after Manufacture; Fumigants and Fumigation; The Common Fumigants; Flour Mill and Warehouse Fumigation; Fumigation in Atmospheric Vaults and Vacuum Chambers; Heat Sterilization in the Flour Mill.

At the end of each chapter is a selected list of references to the subject. An index completes the volume which is printed on heavy white paper by the offset process. The nature of the binding permits the book to remain flat when opened at any page.

It is an excellent contribution to economic entomology and will be a handy reference to the entomologist as well as the farmer, teacher and mill operator.
