**The Precambrian Surface of Ohio.** *Gordon L. Owens.* Report of Investigations 64, Ohio geological Survey, 1207 Grandview Ave., Columbus, Ohio 43212, 1967. 8 p. Folded map. \$2.26.

The principal part of this report consists of a contour map (scale 1:500,000) on the deeply buried Precambrian surface, which lies from 2700 to more than 10,000 feet underground in Ohio. The map was constructed from information from 133 wells in Ohio or near its borders. The booklet which accompanies the map contains a discussion on the general features of the Precambrian surface and the tabulated data from the wells. With the recent interest in deep drilling in Ohio, this map will be welcomed by geologists who are concerned with the structure of the basement and its effect on the overlying sediments.
