INDUSTRIAL ENGINEERING

The curriculum for the new department of industrial engineering has been completed and will appear in the new bulletins. Mr. John Younger (head of the department) will personally teach most of the new courses, with others under Mr. Knight. At present (Spring Quarter) the work of the department consists of a three hour course, Industrial Engineering 712, which proves popular as an elective. As presented last quarter, it consisted of discussions on cost of materials, plant management and layout, marketing, and the relations of these and other factors to each other. Mr. Younger will gladly discuss the new course with interested students.
