**Glacial Geology of Trumbull County, Ohio.** *George W. White.* Ohio Division of Geological Survey, 1207 Grandview Ave., Columbus, Ohio 43212. Full-color single-sheet map, on scale of one inch equals one mile, with text. \$1.75 plus 17 cents mailing charge and 8 cents tax within Ohio.

Glacial deposits cover almost all of Trumbull County. This report describes the origin and character of the deposits composing the moraines, terraces, and lake plains, and differentiates them by color on a base which is a topographic map of the county. Contours on the buried bed-rock surface provide important data on thickness of the drift cover, and a discussion of mineral resources summarizes the role of these deposits in the economic life of the county.

Glacial deposits maps are basic tools for environmental studies. A good map is a valuable guide to sand and gravel deposits, soil types, ground-water possibilities, and engineering and foundation conditions. The Trumbull County report will be useful to property owners, water-well drillers, builders, geologists, engineers, biologists and ecologists, and planning and zoning officials.
