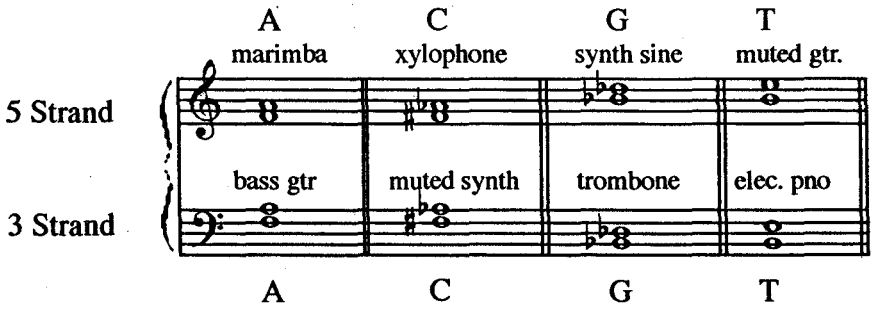
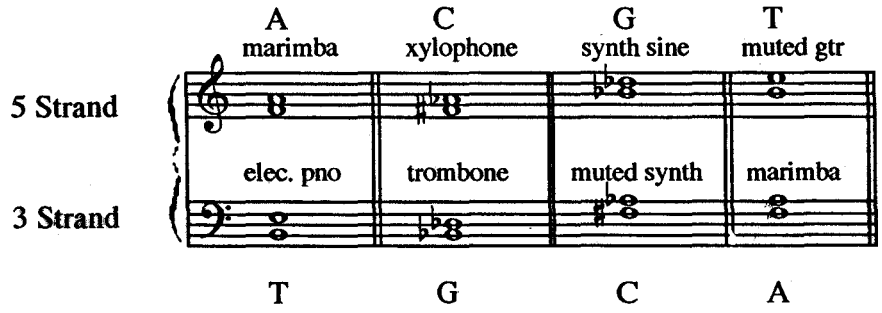
DNA Sequence Sonification Details **Bio 101 Spring 2003**
James Croson

The four base nucleotides are mapped to these musical intervals and timbres:



But the pairings on DNA are with the complements.



Each codon specifying an amino acid is set as a rhythmic and melodic figure as shown on the right, and transposed according to the table below:

Amino Acid	Single letter code	Base Pitch
(stop)	X	B6
Histidine	H	Bb6
Arginine	R	A6
Lysine	K	Ab6
Glutamic Acid	E	G6
Aspartic Acid	D	F#6
Tyrosine	Y	F6
Glutamine	Q	E6
Asparagine	N	Eb6
Cysteine	C	D6
Threonine	T	Db6
Serine	S	C6
Glycine	G	B5
Tryptophan	W	Bb5
Phenylalanine	F	A5
Methionine (start)	M	Ab5
Proline	P	G5
Isoleucine	I	F#5
Leucine	L	F5
Valine	V	E5
Alanine	A	Eb5

A particular DNA sequence of interest was run through an algorithm (a set of rules) in software (MAX/MSP) which automatically does the mappings, and the output MIDI notes drive a synthesizer. I mixed the 5-strand track, the 3-strand track, a track representing the amino acid/codon information, and a track of drums which clarified the sequential/rhythmic structure suggested by the DNA "ladder". Finally, I applied two filters to the above tracks which undulate at the rate of once every 10 bases (one offset from the other about 3 bases) to suggest the twining or twisting of the "ladder".
