

PREA
Post Research Ethics Analysis

The Post-Research Ethics Analysis (PREA) is proposed as a framework for good ethical practice in health research in humanitarian crises.

PREA Tool

- Overview of the web-based PREA Tool
 - NOTE: it is very much in draft format for the next couple of weeks
- <https://www.preatool.com>
- Informed by the PREA systematic review and qualitative interview analysis.
- These gave the ethical themes and issues that shaped the Tool.
- Two main uses:
 1. For research teams to explore the ethical issues in their projects.
- Provides prompts and questions about various aspects.

PREA Tool (cont.)

- Two main uses:
- 2. To search for resources on specific topics.
No personal information collected
- The Tool collects no personal information.
- However: the My Project function
- Also, analytics are collected

Further development

- Try it after April and submit a Comment (bottom of every page)
- Plans to pilot, revise and validate
 - We are looking for research teams or courses interested in piloting and evaluating the Tool.
- Future: wiki function
- Further on: mobile app
