
MEETING OF THE BIOLOGICAL CLUB.

ORTON HALL, Oct. 3, 1904.

President Sanders called the meeting to order. The program for the evening consisted of reports on the summer's work.

Prof. Hine reported the occurrence of about thirty-five species of mammals in the state, one of the bats being new. Prof. Prosser reported the completion of his work in Kansas and Maryland. The summer's work has shown that the rocks of the Lower Helderberg or Waterlime in Ohio are much older than has been supposed. The exact geological position of the rocks and faunas about Sandusky was also determined. Prof. Osborn spoke of his work on the Hemiptera of Ohio and New York, several forms having been found which will probably prove new. Prof. Schaffner reported nutation in six species of plants not previously noted; also work on nodding tips of plants and on Myxomycetes of Clay Co., Kansas. Mr. York reported thirty-six species of plants as new to the Cedar Point list, *Fraxinus biltmoreana* being new to the state.

J. E. HYDE, *Sec. pro tem.*
